## Description

For our project, we plan on refining an online “Step by Step” guide to installing a kitchen cabinet. The instruction set given is extremely short and inconsistent in some steps, not every step has visuals, not every step even has a full description, and the color coding could be hard to read through for some individuals. The entire idea behind the project came as I personally was assembling a cabinet for my dorm. The instructions were nothing but a set of visuals, and since a concept for our sheet hadn’t been fully developed yet, I proposed the idea to Kylie. After getting an agreement from her I knew it wouldn’t take long to find a set that had issues. One search later and two links on the homepage and I found this set, which already had a very disorganized site. While I doubt they would ever integrate our set into the site, It would give me some peace of mind to have a fixed-up version, even if I may never use it. The guide will go through a much more thorough process, adding basic visuals for each step when necessary and slimming down and detailing instructions far more.

Sample Sections for This Project:

1. List of tools/materials needed
2. Explanation of tools/materials if necessary
3. Lay out pre-installation inspection steps
4. Organize and Lay out materials in order
5. Step-by-step process of installing each major piece of the cabinet.
6. Suggested tips and procedures to make installation easier
7. Extra tips or ideas to either add visual enhancements or quality to the build.
